

Wout Goesaert

Astronomy PhD Candidate at Leiden University

About me

I am a PhD student at Leiden University. My current research focuses on studying the evolved phases of stellar evolution in quiescent galaxies using NIR observations.

My passion for astronomy began early, prompting me to join a youth astronomy organisation in Belgium. This organisation ultimately inspired my academic career.

In 2019, I moved to The Netherlands to study astronomy and physics in Leiden, where I have found great joy in collaborating with peers and working alongside inspiring scientists.

I enjoy giving talks, participating in scientific discussions, and stargazing with my Dobsonian telescope.

Areas of specialization

Radio • Infrared • AGNs
• Molecular Astronomy
• ALMA • JWST

RESEARCH PROJECTS

- | | | |
|-----------|---|---|
| 2025—2029 | TP-AGB stars as actors of galaxy evolution
PHD · Leiden University 
Supervisor: Prof. Mariska K.T. Kriek |  |
| 2024 | ALMA: Resolving the torus and outflow of the Circinus AGN
RESEARCH INTERNSHIP · ESO: Santiago de Chile 
Supervisors: Dr. Konrad R. W. Tristram and Dr. C.M. Violette Impellizzeri
Working on a publication that builds on my first master's thesis with a focus on the outflows and inflows traced by the continuum and molecular kinematics. Attempting to construct the first mass balance equation between a SMBH, torus, CND and galaxy. |  |
| 2023—2024 | JWST: H₃⁺ Absorption and Emission Seen by JWST Probes Extremely High Ionisation Rates in (U)LIRGs: 10/10
MASTER THESIS · Leiden University 
Supervisors: Prof.dr. P.P. van der Werf and V.A. Buiten MSc.
Utilised JWST data to study H ₃ ⁺ in (U)LIRGs, leading to the discovery of H₃⁺ emission in the ISM and the highest measured ionisation rates to date. |  |
| 2022—2023 | ALMA: A novel view on the Circinus torus and circumnuclear disk: 9.5/10
FIRST MASTER PROJECT · Leiden University 
Supervisors: Dr. C.M. Violette Impellizzeri and Dr. Alex P.S. Hygate
Cleaned, self-calibrated and combined ALMA radio data. First measurements of the (column)density and temperature in a torus (LTE + non-LTE). Studied line ratios, continuum mechanism, morphology and kinematics at highest spatial resolution to date. |  |
| 2022 | MeerKAT: Polarimetry of Galaxy Cluster Magnetic Fields: 9/10
BACHELOR THESIS · Leiden University 
Supervisors: Dr. Reinout J. van Weeren and Dr. Erik Osinga.
Mapping Faraday rotation of radio sources in Abell 85 using the MeerKAT Galaxy Cluster Legacy Survey. Determined the feasibility and limits of using the MGCLS catalog for this purpose. |  |
| 2021—2022 | Quantum Optics: Delayed Choice Quantum Eraser: 9.5/10
EXPERIMENTAL PROJECT · Leiden University 
Supervisors: Dr. Wolfgang Löffler and Matteo Fiscaro MSc
Built a delayed choice quantum eraser by storing superposition in polarisation of entangled photons in a team of seven. Demonstrated Bell inequality for the first time in Leiden. Took on both a scientific and managing role in the project. |  |
| 2020—2023 | Fluid dynamics: Capillary waves on water jets
FIRST AUTHOR PUBLICATION · Leiden University 
Co-author: Dr. Ir. Paul Logman
Published in the American Journal of Physics. Developed a new method to accurately measure the dispersion relation of capillary waves on water jets and constructed a semi-quantitative simulation for educational purpose. |  |

| 2024 | Goesaert, W. M., & Logman, P. S. W. M. (2024). Easy method to establish the dispersion relation of capillary waves on water jets. <i>American Journal of Physics</i> , 92(2). https://doi.org/10.1119/5.0144849 |
| in prep. | Goesaert, W. M. et al. (in prep.). Strength of TP-AGB Emission in Distant Quiescent Galaxies. |

Popular scientific writing: A wonderful world of physics lies right in front of your nose. Just look and ask "Why?" There is no need for a particle accelerator to do new physics! In my bimonthly column "Exceptioneel Ordinaire Fysica" for the Flemish journal "Astra", I show how extraordinary physics lurks behind ordinary everyday topics and phenomena. I made the illustration above for a recent article in this series on "thermophoresis", which explored the connection between dusty windowsills and an unsolved problem in planet formation.

I love combining my photography hobby with astronomy. This is a narrow-band image of the Crab Nebula that I made with the Isaac Newton Telescope during observing time that was unexpectedly left over.

EDUCATION

2022-present	Astronomy Research Msc. · Leiden University GPA: 9.0/10
2019-2022	Astronomy Bsc. · Leiden University Cum Laude, GPA: 8.8/10
2019-2022	Physics Bsc. · Leiden University Cum Laude, GPA: 8.8/10

AWARDS & GRANTS

2025	Janneke Fruin-Helb Subsidie — Leiden University Fund (LUF)
2024	Scholarship for Chile research project by LUF
2023	1st place Dutch physics Bsc. thesis contest — NNV-SPIN
2022	Bronze Galilei Award — recognition for my commitment to the Belgian Astronomical Society (VVS)
2019	1st place Flemish Astronomy Olympiad
2019	5th place Flemish Physics Olympiad
2015	Young Scientist Award — UHasselt

EXPERIENCE, SERVICE & OUTREACH

2020-2024	Supervision · Leiden, The Netherlands 📍 Supervision of Msc. students: Maria Kalitsounaki (Gas Outflows in Quiescent Galaxies at Cosmic Noon) and Yara Beekhuizen (The Nature of UV Radiation in Quiescent Galaxies).	
2020-2024	Observing experience JWST, ISAAC NEWTON AND MERCATOR · 📍 JWST observation planning for the NIRSpec MOS micro shutter array. Service mode observations using HERMES at the Mercator Telescope (KU Leuven, 3 nights), remote observations with Isaac Newton Telescope (Leiden Uni, 2 nights).	
2024	Teaching assistant PLANETARY SYSTEMS · Leiden, The Netherlands 📍	
2024-present	Organising committee Astronomy Olympiad FLEMISH ASTRONOMY OLYMPIAD COMMITTEE · VVS, Belgium 📍	
2017-present	Public Speaking TALKS, LECTURE SERIES, CONFERENCES AND EVENTS Audiences up to 300p, all age groups and backgrounds. Notable talks: 4 talks at ESO and UDP in Chile, focus talk at Nerdland Festival, yearly 10-part lecture series on astronomy at public observatory (2017-2023), VVS/JVS conferences (2020-2023), Astronomy on Tap Leiden, Cosmic Café Genk, public shows about my research in collaboration with musician NeoMaan, talk at ALMA + JWST Joint Science Day in Groningen.	
2016-present	Popular science writing SEVERAL COLUMNS AND ARTICLES IN POPULAR SCIENCE JOURNALS Including: Exceptioneel Ordinaire Fysica (Astra magazine, 32 pieces), Wistje-hopelijk-nog-niet-datjes (Astra magazine, 5 pieces) + several other publications at EOS, Selena, Astra and Heelal.	
2016-present	President (5y) and board member (8y) at JVS-Descartes BOARD MEMBER · Genk, Belgium 📍 JVS-Descartes is an organisation with the aim of popularising physics and astronomy in children and youth. As president, I led an enthusiastic group of ~10 board members. My other functions included secretary, lecture series on astronomy, observation camp, observing, rocketry, PR, and organising several public events.	
2018-2019	Guide at public observatory: Cosmodrome TOUR GUIDE OBSERVATORY & PLANETARIUM · Genk, Belgium 📍	

PROGRAMMING

I regularly use Python, $\LaTeX$, Linux, GitHub, JWST APT, CASA, CARTA, 3D-Barolo and DS9 for my research activities.
